

Press Release from the World Future Council and “4 per 1000 Initiative”

World Future Council awards international prize for best policies to combat desertification in China

Hamburg (Germany) / Ordos (China), 12th September 2017 – Yesterday, the Future Policy Award (FPA) ceremony was held at the thirteenth session of the Conference of the Parties to the UNCCD in Ordos, Inner Mongolia (China). The international “Oscar for best policies” honours laws and practices that successfully combat desertification and land degradation. The FPA is awarded by the World Future Council (WFC) in cooperation with the United Nations Convention to Combat Desertification (UNCCD). Among the laureates are the Ethiopian Tigray region, Brazil, China and the “4 per 1000 Initiative”.

The ceremony was attended by 300 high-level guests and ministers from all over the world including H.E. Mr. Zhang Jianlong, Minister of State Forestry Administration of China, H.E. Ms. Bu Xiaolin, Governor of Inner Mongolia, as well as Executive Secretary of UNCCD, Mrs. Monique Barbut, and Executive Secretary of the “4 per 1000 Initiative”, Mr. Paul Luu in the name of the Chairman, Dr. Ibrahim Mayaki.

The FPA aims to draw more attention to desertification and effective ways to combat it: In the last century, droughts cost more lives than any other weather-related catastrophe. Climate change intensifies the process of desertification. Actions to combat desertification, therefore, not only contribute to protecting the environment but can also provide social and political stability.

VISION AWARD

The 4 per 1000 Initiative: Soils for Food Security and Climate (2015), was granted the Vision Award. This awareness raising, high-level political initiative communicates a new concept for mitigating climate change through the annual increase in soil organic carbon by 0.4 per cent in the top 30-40 cm of the agricultural soils. It encourages a paradigm shift in agricultural practice.

The Future Policy Award highlights the world's best policies and laws that create the framework for better living conditions for current and future generations.

The winning policies will be introduced in short videos which will be accessible on our [YouTube Channel](#). Further information on the winning policies may be obtained through our [website](#) as well as on futurepolicy.org.

STATEMENTS:

Monique Barbut, Under-Secretary-General of the United Nations and Executive Secretary of the United Nations Convention to Combat Desertification (UNCCD):

“Drylands cover close to 40% of the Earth’s land surface. Hundreds of millions of people are directly threatened by land degradation and climate change is only going to intensify the problem. So far, this underestimated environmental disaster has received far too little attention. The Future Policy Award 2017 is turning the spotlight on the looming environmental challenge and effective responses. The seven Future Policy Awardees are all from affected countries, and demonstrate great environmental and political determination.”

Jakob von Uexkull, Founder of the World Future Council (WFC):

“Drylands are among the most conflict-prone regions in the world. Not tackling desertification and land degradation means accepting humanitarian disasters. But if we take up this challenge, so much is gained: By reversing desertification we can help build peace, food security and a safe future for millions of people.”

Dr. Ibrahim Mayaki, Chairman of the “4 per 1000 Initiative”:

“This represent for us a major international recognition, because our Initiative is young and it needs it. It is at the same time a wonderful encouragement for the promotion of carbon sequestration in soils in agriculture and forestry, that will allow us to tackle the major challenges of the next 30 years which is climate change and food security”

BACKGROUND

The **Future Policy Award** is the only award which honours policies rather than people on an international level. Each year, the World Future Council chooses a topic for the Future Policy Award on which policy progress is particularly urgent. In 2017, in partnership with the United Nations Convention to Combat Desertification (UNCCD), laws and policies were evaluated that contribute to the protection of life and livelihoods in the drylands, and help achieve Sustainable Development Goal 15, target 3, to “combat desertification, restore degraded land and soil, including land affected by desertification, drought and floods, and strive to achieve a land degradation-neutral world.”

The World Future Council

The World Future Council brings the interests of future generations to the centre of policy-making. Its up to 50 eminent members from around the globe have already successfully promoted change. The Council addresses challenges to our common future and provides decision makers with effective policy solutions. In close cooperation with civil society actors, parliamentarians, governments, business and international organizations the World Future Council identifies “best policies” around the globe. The World Future Council is registered as a charitable foundation in Hamburg, Germany.

The United Nations Convention to Combat Desertification

The United Nations Convention to Combat Desertification (UNCCD) is the only legally binding international agreement on land issues. The Convention promotes good land stewardship. Its 196 Parties aim, through partnerships, to implement the Convention and achieve the Sustainable Development Goals. The end goal is to protect our land, from over-use and drought, so it can continue to provide us all with food, water and energy. By sustainably managing land and striving to achieve land degradation neutrality, now and in the future, we will reduce the impact of climate change, avoid conflict over natural resources and help communities to thrive.
